Presari – How it Works

This Presari Digital Health Guide is a specialized search tool that provides access to up-to-date and current guidance on a host of coronavirus issues and practical topics.

The search tool uses Presari, which operates like a TV remote control for search engines.

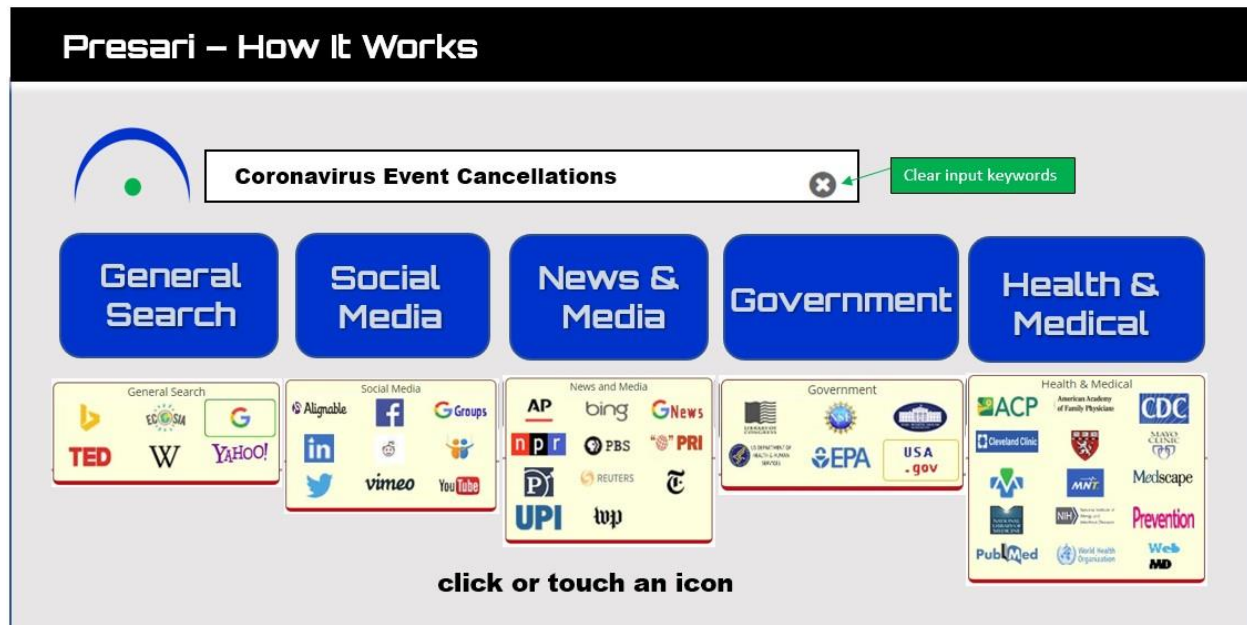

There is no typing needed. The keywords are already loaded.

Just click or touch an icon and the results open for you.

You just click or touch a link that you are interested in and a Presari search page opens gives you instant access to:

- **General Search Engines.** Google, Bing, TED, Wikipedia, and more.
- **News Media**-the most current media coverage from Google News, Bing News, prime media, magazines, news services, news syndicates, news web sites online.
- **Social Media**–FaceBook, Twitter, LinkedIn, YouTube & more.
- **Government Search Engines** – Library of Congress, The White House, Human Health and Services, EPA, USA.gov.

- **Health & Medical Search Engines** – Centers for Disease Control, Cleveland Clinic. Mayo, Harvard, Medline Plus, Medscape, Medical News Today, NIH, PubMed and the World Health Organization.

Example: [Coronavirus Event Cancellations](#)

Presari is designed to save time researching and staying current with the rapidly changing situation. There is new information every minute of every day and the results change constantly.

Just select what you are interested in and you can select the best and most trustworthy sources. You don't need to know or enter the keywords or websites. Just swipe or scroll and click or touch. Then select the source. At any search engine you choose, you can then use their tools to refine your search results.
